Stress & Burnout: Understanding, Recovery & Prevention

An 8-lesson evidence-based course on chronic stress, burnout recognition, boundary-setting, and sustainable recovery

8 LESSONS | 8–10 HOURS | EVIDENCE-BASED

When Stress Doesn't Stop

Everyone experiences stress. It's normal and even helpful in short bursts. But when stress becomes **chronic** — when recovery never quite happens — it shifts into something more pervasive.

Burnout is not laziness or weakness. It is a recognized occupational phenomenon defined by the World Health Organization.

Emotional Exhaustion

Feeling drained, depleted, and unable to cope — even after rest.

Cynicism & Distance

Growing detachment, negativity, and mental withdrawal from work and relationships.

Reduced Efficacy

Doubting your own competence and feeling like your efforts no longer matter.

The WHO defines burnout across these three dimensions — and recognizing them is the first step toward recovery.

The Burnout Spectrum

You don't go from fine to burned out overnight. Burnout is a gradual progression — and the earlier you recognize where you are, the sooner you can course-correct.

1

Engaged

Challenged but energized. Performing at your best.

2

Overextended

Working harder, recovering less. Warning signs begin.

3

Disengaged

Going through the motions. Motivation fades.

4

Ineffective

Doubting your competence. Output suffers.

5

Burnout

Complete depletion across all three dimensions.

Why This Matters

Most people don't realize they've crossed into burnout territory until they're deep in it. The spectrum model helps you identify your current position — and take action before reaching the point of complete depletion.

Each stage has its own warning signs, and each requires a different response. This course teaches you to read the signals early.

What You'll Learn

Eight lessons. Eight transformative skills. Each module is grounded in research and designed for immediate, practical application.

1

Stress vs. Burnout

Distinguish normal stress, chronic stress, and clinical burnout — and understand why the difference matters.

2

Brain & Body Impact

How chronic stress reshapes your brain, disrupts your immune system, and affects long-term health.

3

Triggers & Warning Signs

Identify your personal stress triggers and recognize early warning signs before they escalate.

4

Boundary Setting

Set effective, sustainable boundaries at work and in personal life — without guilt.

5

Evidence-Based Relief

Breathing techniques, mindfulness practices, and movement strategies backed by science.

6

Recovery Experiences

The four scientifically validated recovery experiences that genuinely restore energy and resilience.

7

Lifestyle Foundations

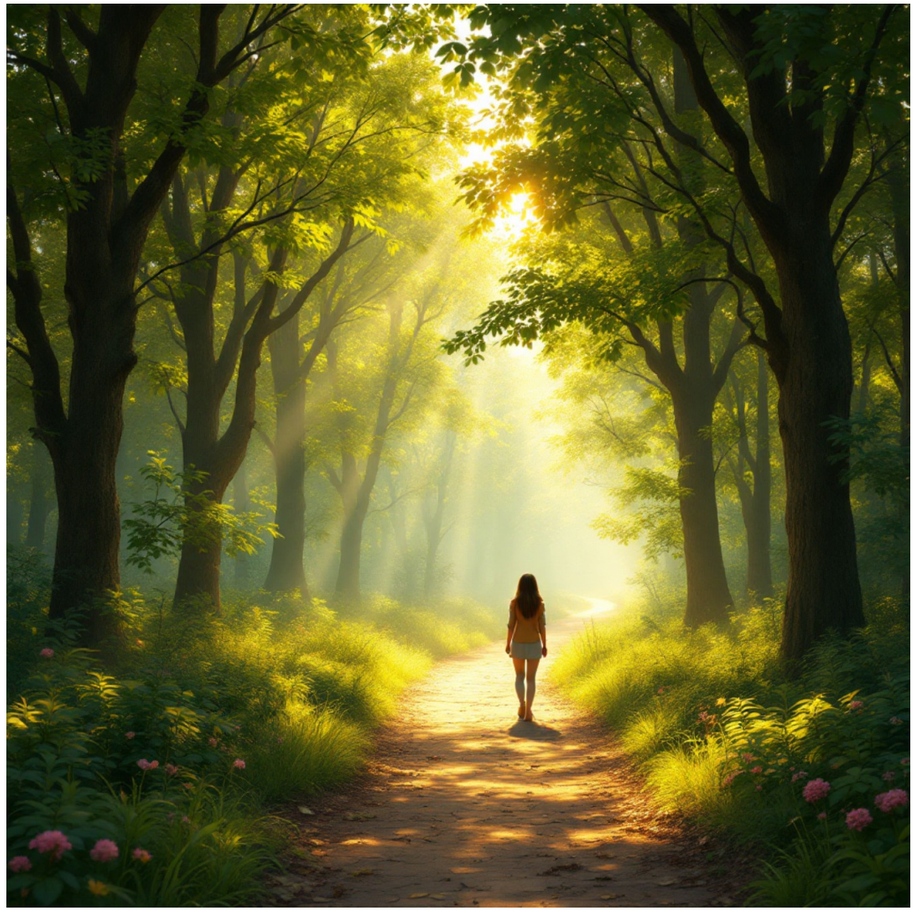
Sustainable changes in sleep, movement, nutrition, and social connection that protect your wellbeing.

8

Rebuild & Prevent Relapse

How to recover from burnout fully — and build a life that prevents it from returning.

Recovery Is Not Optional



Beyond the Vacation Fix

Burnout doesn't resolve with a vacation. A week away may dull the edges, but without structural change, you return to the same conditions that caused the burnout in the first place.

True recovery requires changes to your **boundaries**, your **routines**, and often your **environment**. It is a process — not an event.

> This course gives you the tools to both recover from burnout and build a life that prevents it from returning.

Structural Change

Rethink the systems, habits, and environments that sustain chronic stress.

Genuine Restoration

Learn what real recovery looks like — and how to make it a non-negotiable part of your life.

Relapse Prevention

Build lasting resilience so that burnout doesn't become a recurring pattern in your life.

Course Structure

A self-paced, research-backed program designed to fit your life — and change it.

8

Lessons

Each focused on a distinct, actionable skill set.

10

Hours Max

Complete the full course in 8–10 hours at your own pace.

100%

Evidence-Based

Every strategy is grounded in peer-reviewed research.

🧠 Science-Backed

Rooted in psychology, neuroscience, and occupational health research.

⏱️ Self-Paced

Learn on your schedule — no deadlines, no pressure.

🔧 Practical Tools

Every lesson ends with techniques you can apply immediately.

🔄 Lasting Change

Designed not just for recovery, but for sustainable prevention.
